A VIN Verification is required in various situations to ensure accurate documentation and compliance with California DMV regulations.

- **Out-of-State or Foreign Vehicles:** Necessary for vehicles entering California, whether purchased from out-of-state dealers or manufacturers.
- **Body Type Changes (BTM):** Required when a vehicle's configuration changes, such as converting a dump truck to a flatbed or updating the classification for insurance purposes.
- **Lien Sale Verification (VLT Stop):** Confirms physical possession of a vehicle after a lien sale.
- **IRP Program Compliance:** Verifies mileage for vehicles enrolled in the International Registration Plan.
- **Old Vehicles:** Reintroduces vehicles that have fallen off the DMV system due to inactivity.
- **VIN Corrections:** Resolves discrepancies between the title and the physical VIN.
Odometer Corrections: Adjusts incorrect odometer readings on vehicle records.
- **Year Corrections:** Updates inaccurate model years listed on the title.
- **Other Corrections:** Fixes errors like fuel type, axle count, or other important vehicle data.
- **Vehicle Conversions:** Reclassifies a vehicle, such as changing from private to commercial use or from off-highway to on-highway status.

Each of these scenarios ensures your vehicle's records are accurate and compliant with California's DMV requirements.
